11. How many kilojoules of heat energy are required to heat all the aluminum (C$_p$ of Al = .902J/g$\cdot$°C) in a roll of aluminum foil (500.0 g) from room temperature (25.0 °C) to the temperature of a hot oven (250.0 °C)?

12. One way to cool down your cup of coffee is to plunge an ice-cold piece of aluminum into it. Suppose you store a 20.0 g piece of aluminum (C$_p$ of Al = .902J/g$\cdot$°C) in the refrigerator at 4.40 °C and then drop it into your coffee. The coffee temperature drops from 90.0 °C to 55.0 °C. How many joules of heat energy did the aluminum block absorb? (Ignore the cooling of the cup)

13. Suppose you pick up a 16.0-kilogram ball of iron (such as a “shot-put” ball at a track event). The iron (C$_p$ = .451J/g$\cdot$°C) ball has the same temperature as the atmosphere on a cool day say 16.0 °C. How many kilojoules of heat energy must the iron ball absorb to reach the temperature of your body (37.0 °C)?

14. The specific heat of silver is 0.24 J/g$\cdot$°C. How much heat in joules must be added to a silver block of mass 86.0 g to raise its temperature by 9.00 °C?

15. An 18.7 g sample of platinum metal increases in temperature by 2.30 °C when 5.70 J of heat are added. What is the specific heat of platinum?
